Student Answer Sheet

Subject: Deep Learning | Sample student: Alex Student | 10 questions

Synthetic sample responses for testing PDF extraction and answer evaluation. Some answers are partial or incorrect by design.

Q1. Explain deep learning. [2 marks]

Answer:

Deep learning is machine learning that learns patterns from data through neural networks with many layers.

Q2. Explain neural network. [2 marks]

Answer:

A neural network is a system of connected nodes like the brain.

Q3. Explain training data. [2 marks]

Answer:

Training examples are the data a machine-learning system learns from during training.

Q4. Explain testing data. [2 marks]

Answer:

A separate test set checks how well a trained model performs.

Q5. Explain machine-learning model. [2 marks]

Answer:

A trained model uses input data to produce a prediction or decision.

Q6. Explain regression. [2 marks]

Answer:

A regression model estimates numeric outcomes such as temperature or price.

Q7. Explain label. [2 marks]

Answer:

In supervised learning, the label is the target answer paired with an input example.

Q8. Explain data mining. [2 marks]

Answer:

Data mining searches large collections of data for useful patterns and insights.

Q9. Explain algorithm. [2 marks]

Answer:

A finite sequence of instructions that solves a task is an algorithm.

Student Answer Sheet

Subject: Deep Learning | Sample student: Alex Student | 10 questions

---

Q10. Explain prediction. [2 marks]

Answer:

Prediction means manually labeling the training examples before fitting a model.
